Requirements Updated - 03/21/2012

1. Add a new Function dropdown to the Residential Homes Organization Index that will allow users to filter search criteria by function.
2. Add a new button that allows users the ability to select organizations to assign/open HOST access.

Notes for Discussion

1. Would assigning/opening HOST for the organization grant access to all contacts within the org who have HOST access already assigned?
2. When ICF grants this access will they notify the providers or should we think about some type of email correspondence to the users/contacts?
3. Can we set a limit on how long HOST would stay open for these users/contacts or do we need to also think about a way to close HOST?
